3CX Android and iOS app

3CX was built for remote work. With the iOS and Android apps, business communications are no longer tied to the office building. Take your extension with you anywhere and work on-the-go.

- * Make and receive calls from your desk number
- * Secure communication with tunnel encryption
- * Direct internal calling from your mobile app
- * Easily transfer calls and chat to colleagues
- * Start a video call from your smart phone
- * Configure remotely via QR code
- * Change your availability status
- * See your teams availability
- * No hassle setup

Hosted 3CX provides a totally managed solution

What if you could boost customer service and make it easier for staff – all while saving money?

A hosted 3CX on a shared server allows you to have all the feature of 3CX a set cost per extension. There is no annual licence fee, not setup fee, no contracts and all system changes and no data center costs. This option is more cost effective for businesses with 1—10 handsets and if you require more handsets we can migrate you to your own 3CX instance.

With 3CX, you'll have a full-featured phone system – call queues, built-in video calls, web conferencing and more.

All these features are remote-friendly; your team can use them from anywhere via mobile and browser apps or desk phone.

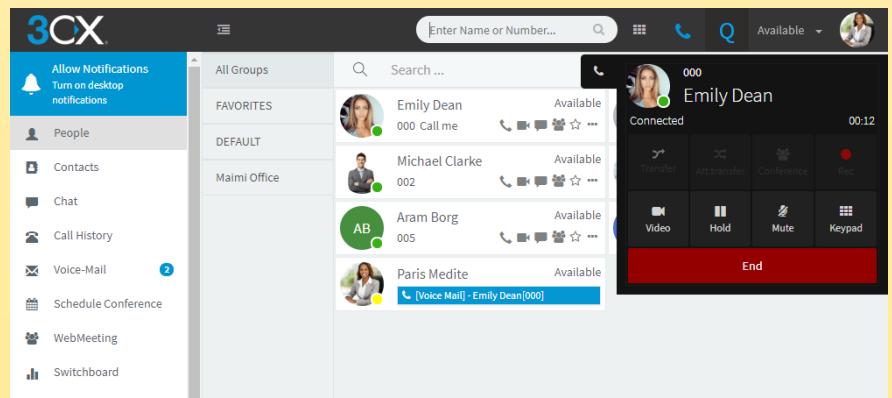

3CX scales with your business and remains cost effective!

And 'YES' you can take your existing number with you.

Flexible solutions for your business needs

Hosted PBX Key features

- Expand your system as you grow
- Enhanced PBX features
- Mix and match your handsets
- No geographical boundaries
- Take your number with you
- Ongoing support included
- Join all your sites on one system
- NBN Ready

YOUR PHONE SYSTEM YOUR WAY

Putting your new system together is as easy as choosing your handsets and VoIP trunk provider and we will tailor the rest.

Handsets

Choose from a range of business VoIP handsets that suit your business needs.

Example– A small business with a reception and 3 staff would require
3 x Yealink T53W handsets with optional headset
1 x Yealink W56 cordless handset (as an option)

Call flow and features

We will help you with the call flow for incoming calls, IVR menu's, greetings, afterhours messages, voicemail, music on hold, handset customisation and training for your staff.

Optional extras like overhead paging integration, expansion modules for more keys on your reception handset, Bluetooth and DECT cordless headsets are just a few of the optional extras we have available.

Join your sites together

If you have multiple site locations we can join them together on the one system. Your reception can see the status of any phone in your group and you can transfer and announce calls at the push of a button.

Answer calls for all your offices from a single reception phone with caller ID showing which office the caller rang and best of all there is no charge for calls across sites.

Handsets and accessories
