3CX Android and iOS app

3CX was built for remote work.

With the iOS and Android apps, you are no longer tied to your business. Take your extension with when you are not at work.

Never miss a call again while you are picking up supplies.

- * Make and receive calls from your office number
- * Direct internal calling from your mobile app
- * Easily transfer calls
- * Check your voicemail
- * Change your voicemail messages
- * No hassle setup

What is a hosted 3CX phone system?

Unlike traditional phone systems 3CX is a cloud based phone system hosted in a premium Data Centre. Being software based you will never have your system end of life and replaced with a brand new system and handsets after 3 years.

A hosted 3CX on a shared server allows you to have all the feature of 3CX at a set cost per extension without having your own server. This means there is no annual licence fee, no setup fee, no contracts, no data centre costs and all system changes are managed for you.

This option is more cost effective for businesses with 1—10 handsets and if you require more handsets we can migrate you to your own 3CX in the future.

With 3CX, you'll have a full-featured phone system – Call queues with welcome messages, music on hold, voicemail with email notifications all comes as standard.

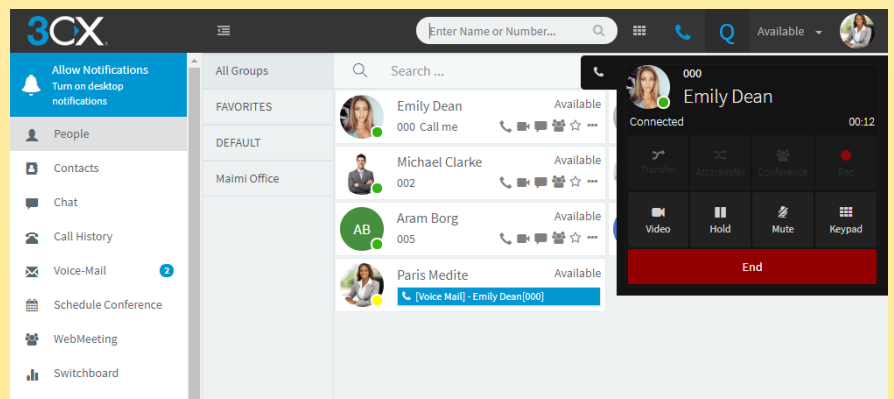

3CX scales with your business and remains cost effective!

And 'YES' you can take your existing number with you.

Flexible solutions for your business needs

Hosted PBX Key features

- ◆ Mobile client to take calls when you are out of the office
- ◆ After hours messages or call diversions
- ◆ Answer calls from a single location if you have multiple sites

- Only purchase what you need
- Expand your system as you grow
- Enhanced PBX features
- Mix and match your handsets
- No geographical boundaries
- Take your number with you
- Ongoing support included
- Join all your sites on one system
- NBN Ready

YOUR PHONE SYSTEM YOUR WAY

Putting your new system together is as easy as choosing your handsets and VoIP trunk provider and we will tailor the rest.

Handsets

Choose from a range of business VoIP handsets that suit your business needs.

Example– A restaurant or pizza bar with takeaway

1 x Yealink T53W handsets

1 x Yealink W56 cordless handset

Call flow and features

We will help you with the call flow for in coming calls, greetings, afterhours messages, voicemail, music on hold, set your opening and closing hours and training for your staff.

Can choose your own VoIP provider or we can analyze your current phone bill to recommend the most cost effective option for you.

At anytime you can add handsets as your business grows or use the soft client for when you are on the move.

Join your sites together

If you have multiple site locations we can join them together on the one system. Your can see the status of any phone in your group and you can transfer and announce calls at the push of a button.

Answer calls for all your locations from a single reception phone with caller ID showing which office the caller rang and best of all there is no charge for calls across sites.

Handsets and accessories

Yealink T33G
\$189
